

## **Counterbalance Forklift License Saskatchewan**

Counterbalance Forklift License Saskatchewan - When operated by fully trained operators, forklifts could become a major advantage for companies and firms. We can offer your employees a thorough training program which covers all factors of operating a powered lift machine. Counterbalance forklift training offers operators of forklifts with the practical skill and understanding needed to be able to operate forklifts efficiently and safely. The particular program offers a combination of classroom theory, hands-on training and participant observation within a warehouse-type environment. Training could be on site and/or customized.

The course goes through the lift truck basics, rules and regulations, components, load centres and factors affecting stability. Procedures concerning the general operation of the forklift is taught, in addition to circle checks, startup, forward/reverse on level ground, shutdown, and operating around other individuals. Load handling topics comprise selection of loads, load pickup and placements, load security and integrity, loading and off-loading trailers. Participants will learn operational maintenance procedures, such as recharging and refueling. Workplace safety issues will be discussed. Those participating will know the environmental conditions affecting lift truck performance and be able to recognize potential dangers. Advanced training on propane handling could be incorporated.

Both employers and employees could deal with severe penalties if national and industry guidelines are not followed in the operation of forklifts. Employees who operate a reach truck or forklift should be well-informed regarding the rules concerning their safe operation. Training is recommended for any individual applying for work which needs forklift operation.

We provide in-class theory and hands-on training inside small, personalized classes. Training choices comprise entry level or refresher courses.
