

Forklift Training Program Saskatchewan

Forklift Training Program Saskatchewan - The forklift is a common powered industrial vehicle which is in wide use these days. They are sometimes referred to as lift trucks, jitneys or hi los. A departments store will make use of the forklift in order to load and unload merchandise, while warehouses will make use of them to stack products and materials. And grocery stores make use of small models to drop supplies in the aisles. Whether loading material at a construction site or transporting lumber at a sawmill, forklift operators must be correctly trained and certified. The main concern must be on pedestrian and worker safety. This forklift training course teaches the safety and health regulations governing forklifts in order to ensure their safe and efficient utilization.

Forklift Training Program Safety Tips:

Forklift training courses are meant to ensure that the operator is able to control the forklift safely in traveling, lifting and tilting. Just trained operators should drive a forklift.

Safety guidelines when traveling - hands, head, legs, arms and feet must be kept inside the forklift truck throughout traveling. The forks must be tilted back and low to the ground. Observe posted traffic signs. Sound the horn and reduce speed if taking a corner. If the vision of the driver is blocked by the load, slowly drive backwards. Pre-inspect the ground for possible dangers, such as oily or wet spots, objects, rough patches, holes, vehicles and people. Avoid stopping immediately.

If pedestrians pass across the vehicle or moves into a blind spot, the forklift must be stopped, the load lowered, waiting until the way is clear. If a load is being transported on an incline, the forks should be pointed uphill with a load and downhill without a load. The lift truck should just be turned around when on level ground.

Safety guidelines while steering - When traveling at good speeds, never turn the steering wheel sharply. Support the load utilizing the front wheels and turn utilizing the back wheels. An overloaded truck would be difficult to steer. Adhere to load limitations. Do not add a counterweight in order to improve steering.

Safety guidelines when loading - Follow the recommended capacity and load restrictions of the forklift. This information is displayed on the data plate. Always ensure that the load is positioned according to the recommended load centre. The lift truck would remain stable as long as the load is kept near the front wheels.

Prior to inserting the forks into the pallet, the forklift mast should be in an upright position. Level the forks before inserting them.
